Airxchange Inc.: Online ERV Estimation Tool

By: JoAnna Turpin

The AIRX Estimator for the Environment is a free online estimation tool which can quickly calculate the positive environmental impact and dramatic energy savings possibilities when commercial buildings utilize energy recovery ventilation (ERV) technology. The online tool helps building owners, energy engineers, facility managers, and others quickly quantify the CO₂ reduction by energy source for specific buildings by inputting three pieces of information: city location (currently available for the U.S. and Canada), number of occupied building hours, and cfm of outdoor air. For users not aware of a building's cfm of outdoor air, the AIRX Estimator provides a cfm estimator based on ASHRAE standards.
